Portfolio: mostafagaberahmed.site | GitHub: github.com/MostafaGaber135 | LinkedIn: linkedin.com/in/mostafagaber135

PROFESSIONAL SUMMARY

Frontend Developer who enjoys building responsive, well-structured web applications. Focused on writing clean code, integrating APIs efficiently, and making sure the result feels smooth for users across all devices. Always looking to learn, improve, and work with teams that care about quality.

WORK EXPERIENCE

Frontend Developer – PentaValue
Apr 2026 – Present | Full-Time

- Develop and ship production-ready frontend components in a fast-paced Agile environment, contributing to client-facing products across multiple business verticals.
- Own end-to-end frontend feature delivery from technical design through code review to deployment, collaborating closely with backend engineers and product managers.
- Optimize application performance through code splitting, lazy loading, and caching strategies, improving page load times and overall responsiveness.
- Implement responsive, accessible UI layouts supporting 3+ screen breakpoints with a modular component architecture, ensuring consistency across a shared design system.

Frontend Developer Intern – PentaValue
Jan 2026 – Mar 2026 | Internship

- Built and maintained reusable UI components with consistent structure and clear separation of concerns, making them easy to scale and reuse across the project.
- Integrated 5+ RESTful API endpoints with centralized error handling, improving data reliability and reducing failed requests across the application.
- Demonstrated rapid learning and ownership of tasks, leading to a full-time offer within 3 months of joining.

Frontend Developer – Beetleware
Nov 2025 – Mar 2026 | Internship

- Developed 10+ reusable UI components using React and Tailwind CSS within a modular architecture, helping speed up feature development across the team.
- Translated Figma design mockups into pixel-perfect, accessible interfaces using clean semantic HTML.
- Worked closely with the team on reviewing code, fixing bugs, and delivering features on time within sprint cycles.

Front-End & Cross-Platform Mobile Developer – ITI (Information Technology Institute)
Dec 2024 – Apr 2025 | Intensive Training Program

- Completed a 4-month intensive program covering advanced React patterns, Next.js (SSR/SSG), TypeScript, and cross-platform mobile development fundamentals.
- Built multiple full-stack projects applying component-driven architecture, React hooks, client-side routing, and global state management with Context API.
- Gained hands-on experience with Git workflows, CI/CD basics, and collaborative development practices in a structured engineering environment.

Frontend Developer – PassAhead (Freelance)
Freelance Project | passahead.com

- Architected and developed a full-scale exam preparation platform using Next.js and Tailwind CSS, serving 100+ active users with a bank of 1,000+ questions.
- Engineered optimized data fetching and rendering pipelines for large question datasets, achieving a 30% reduction in initial page load time through lazy loading and efficient API pagination.
- Designed a fully responsive, mobile-first interface with intuitive navigation and dynamic filtering, ensuring consistent UX across all viewport sizes.

PROJECTS

CodeMap – Developer Learning Roadmap Platform
Next.js · Material UI · Supabase | Live Demo

- Built a bilingual (Arabic/English) web application with 20+ structured learning roadmaps, using Next.js App Router with SSG for fast page loads and SEO optimization.
- Provided learning content in both Arabic and English, with dynamic content switching to serve a wider developer audience.
- Integrated Supabase as a backend-as-a-service for real-time data management and scalable content delivery.

Veritas – Real-Time News Aggregation Platform
React · TypeScript · Tailwind CSS · Vercel Serverless | Live Demo

- Developed a TypeScript-first React application for browsing and searching 1,000+ real-time news articles via the GNews API, with debounced search and category-based filtering.
- Implemented a secure API proxy layer using Vercel serverless functions to protect API keys from client-side exposure, demonstrating security-conscious architecture.
- Optimized rendering performance with React.memo and conditional re-renders, ensuring smooth UX even with high-frequency data updates.

MovieFlix – Movie Discovery & Favorites App
React · Context API · React Router · DaisyUI | Live Demo

- Built a single-page application consuming the TMDb REST API to browse 500+ movies, with global state management via Context API for favorites persistence using localStorage.
- Implemented debounced search, dynamic routing for detail views, and optimistic UI updates for a fast, app-like browsing experience.
- Designed a responsive grid layout with DaisyUI and Tailwind CSS, supporting fluid transitions across 3 breakpoints (mobile, tablet, and desktop).

EDUCATION

Bachelor of Computers & Information Technology
Egyptian E-Learning University, Faculty of Information Technology | Asyut, Egypt
2020 – 2024 | GPA: 3.41/4.0 (B+) | Graduation Project: RoadX (Grade: A+)

TECHNICAL SKILLS

Core: JavaScript (ES6+), TypeScript, HTML5, CSS3, Responsive Design, Semantic HTML

Frameworks & Libraries: React, Next.js, React Router, Context API

UI Systems: Tailwind CSS, Material UI (MUI), DaisyUI, Sass, Bootstrap

Backend: RESTful API Integration, Firebase, Supabase

Tools: Git, GitHub, Vercel, Netlify, Postman

LANGUAGES

Arabic (Native) | English (B2 – Upper Intermediate)

CERTIFICATIONS

- Master Git & GitHub: Essential Skills for Developers – Udemy (2024)
- Introduction to Web Technologies – Information Technology Institute, ITI (2023)
- IC3 Digital Literacy – Faculty of Computers and Information, Asyut (2020)
